6062 Corner Cabinet Knock Down Guide

Step 1: Detach the doors from the hinge and remove any adjustable shelves. **Step 2:** Lay down the corner cabinet. Using a screwdriver, remove the screws that hold the base and the bottom panel together. Then remove the screws that hold the bottom panel and the main assembly together.

Step 3: Set the main assembly upright. Remove the crown then unscrew the top panel from the main assembly. **Step 4:** At the bottom of the fixed shelf you'll find a set of screws that hold the fixed shelf with the rest of the assembly. Remove the screws that bind the back panel and the fixed shelf together. From behind, unscrew the back panel from the main assembly.

Step 5: Remove the rest of the screws that hold the fixed shelf with the rest of the main assembly. While one person is supporting the fixed shelf, slide the left side panel away from the main assembly. **Step 6:** Still supporting the fixed shelf, slide the right side panel away from the fixed shelf.
